

How Oxyganic Benefits our Shelter
2000 to Present
Animal Rescue League of El Paso, Texas

We have used Oxyganic on a regular basis since 2000.

Mrs. Doubtfire was burned by juveniles and left to die. Oxyganic was applied to her burns 3 times a day ever day for weeks. Within days her burns had started showing signs of healing. Her hair started growing back within a couple of weeks. Her underbelly had new skin.

We rescue dogs from deplorable conditions where animals are left in urine and feces for weeks their skin literally rots off. They are bathed then Oxyganic is saturated on affected areas until healing occurs. Before using oxyganic, the healing process took several months longer. Oxyganic has been a tremendous asset when it comes to treating ringworm.

We also use it in cats as a preventative in the drinking water especially after being diagnosed with urinary tract infections. Eye infections clear up much faster when flushing eyes with Oxyganic before treatment. Wound flushing has never shown as much healing until using Oxyganic to flush open sores and punctures.

On a personal note: I almost cut my finger off on a piece of metal. I would soak my finger 2 times a day for 2 weeks. My doctor couldn't believe how fast it healed.

This is an amazing product that should be shared with everyone in the medical field; from burn units to veterinary clinics to diabetic wound care centers. It should and could be a blessing to any who use or just try it. Proof is in the pudding. It speaks for itself.
