To Whom It May Concern:

My name is Vanessa Hernandez. I have been Veterinarian Technician for six years in El Paso, Texas. In this time, I have encountered "Oxyganic" in both the general practice of our clinic, in treatment of wild avians, in use at Animal Rescue League, and the Riridoso Humane Society/Animal Control. In my experience, the product is utilized topically for wound care such as skin lesions, punctures, hotspots, mange and even ringworm. It is an excellent flushing solution or soak agent, which can be administered along with antibiotics to increase healing for a speedy recovery. In avians, we have sprayed drinking water as well and yielded the effect of less stress, increased eating, and overall a better turn around in appearance. Oxyganic also has helped in small reptiles and rodents, where strong antibiotics cannot be used because of there size. We also prescribe Oxyganic to our clients that wish to aid bad breath and dental problems. Oxyganic seems to help decrease plaque build up and lengthen the time between needed dentals on patients with chronic gum problems. It is also very safe; I have never witnessed a single side effect or negative outcome using the product. As a Vet Tech it is pleasant to work with because it is painless and tasteless for easier patient compliance. During my trips to aid the Ruidoso Humane Society and volunteering for Animal Rescue, I have also provided Oxyganic to the staff there who have also reaped the benefits of the product

Sincerely,
